Expirents on packet capture tool : wireshark

AIM:

computing and analyzing packets using wireshark tool to filter capture, view, packets in wireshark tool, Capture 100 packets from the Ethernet IEEE 802.3 Capture LAN Interface and save it.

procedure:

1) select local Area connection in wireshark.
2) Go to capture option.
3) select stop capture automatically often 100 packets
4) then click start capture.
5) Save the packets.

1. Create a filter to display only TCP/UDP packets inspects the packets and provide flow graph.

→ select LAN in wireshark.
→ Go to capture option.
→ select stop capture automatically after 100.
→ then click start capture.
2.
→ search tcp packets in search bar.
→ to see flow graph click statics.

2. Create a filter to display only ARP packets and inspect the packets procedure.

→ Go to capture option.
→ select stop capture automatically after 100

packets then start.

→ search ARP packets in search bar.

3. Create a filter to display only DNS packets and provide the flow graph.

→ go to capture option.

→ select stop capture.

→ click start.

→ search DNS

→ to see flow graph click statics.

4. Create a filter to display only http packets and inspect the packet procedure.

→ select LAN in wireshark.

→ Go to capture.

→ click start.

→ Search HTTP.

→ Save packet.

5. Create filter to display only Ip/ICMP packets and inpect the packets.

→ select LAN in wireshark.

→ go to capture.

→ select stop.

→ select start capture.

→ search ICMP/IP packets.

6. Create a filter to display only DHCP packets and inspect the packets.

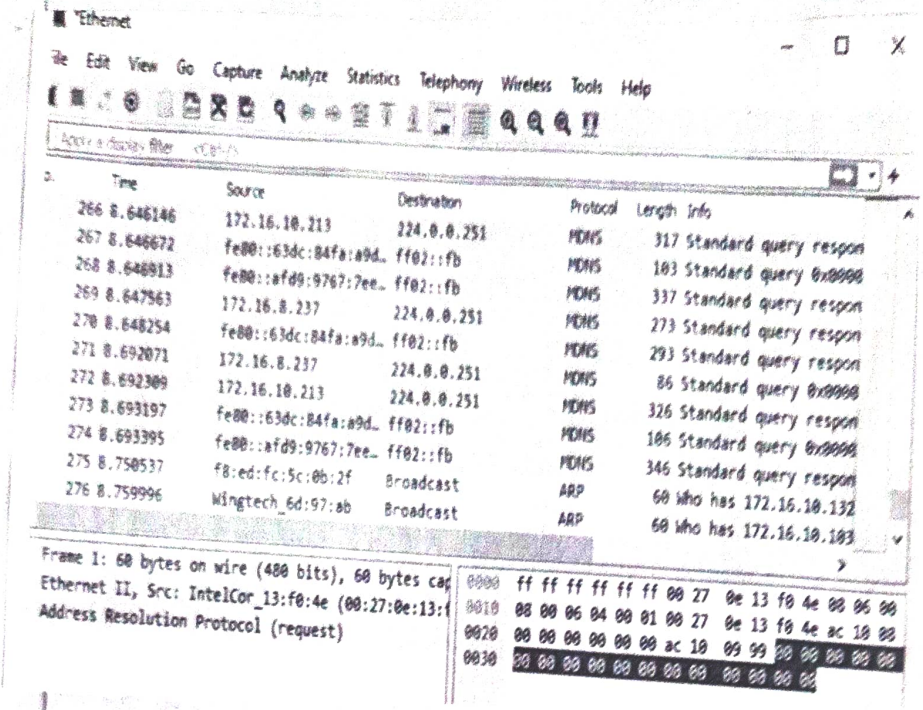

→ select LAN.

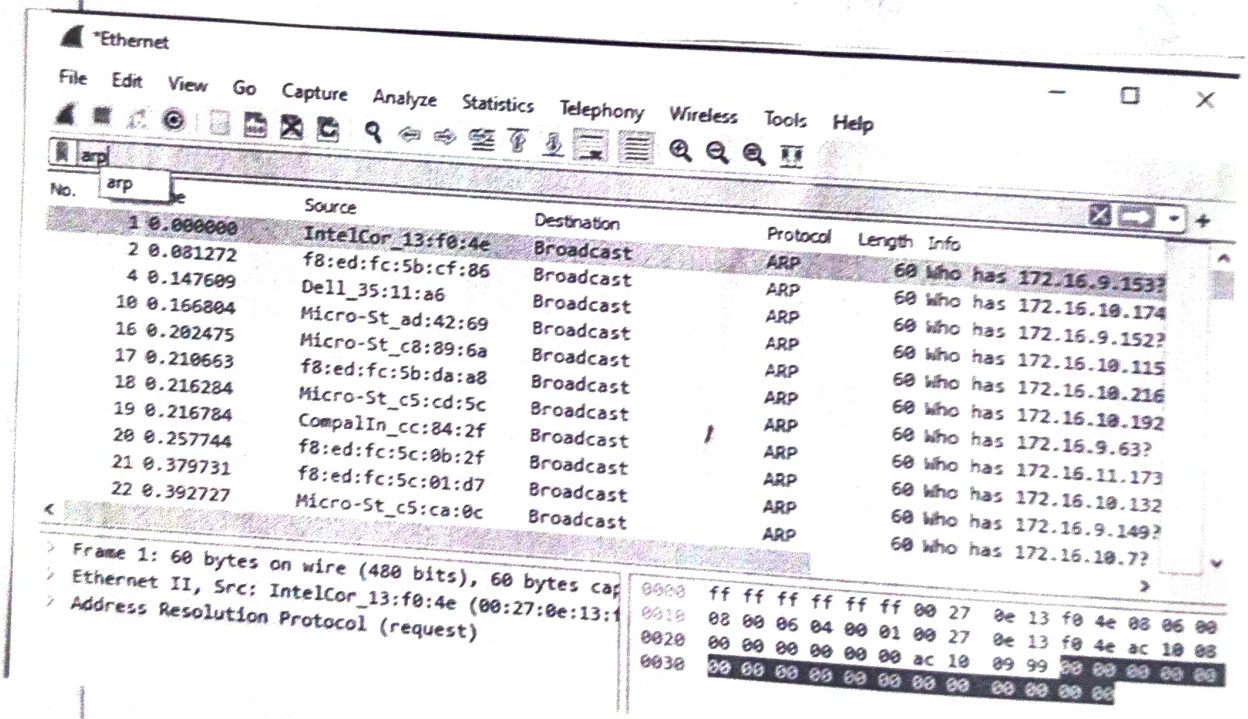

→ Go to capture select stop.

→ then click start.

→ search DHCP

→ Save packets.

Result:

Thus, Different network protocols were successfully captured filtered and analyzed using wireshark
